CBS | Panasonic®
Asset construction is Gold dominant, with the gold gradient rings being the most prominent design element.

The gold, black, and green circles are used only at 5-15% opacity, and should have a gradient mask to soften these elements. These are the only elements that are green. Solid green circles should be used sparingly within the overall composition.

In motion assets:
The black fabric base is a video element. The gold rings and light leak animate.
